EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Sidney Weatherford on 6/6/05.

The application has been amended as follows:

Claim 27, line 1, after "The", delete "method", insert --first node--.

Claim 28, line 1, after "The", delete "method", insert --first node--.

Claim 29, line 1, after "The", delete "method", insert --first node--.

Cancel claim 30.

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance:

The present invention is directed to a method and a system of using a first node to manage a plurality of calls maintained by a second node. Each independent claim identifies the uniquely distinct features: regarding claim 1 (originally filed claim 7), detecting a second call selected from the plurality of calls during a second setup phase; recording a second record in the memory of the second call without an indication of a second call through connection; receiving a message at the first node announcing a restart operation within the second node; examining the first record of the first call and the second record of the second call; determining that the second record of the second call does not include the indication of the second call through connection; and releasing the second call; regarding claim 11 (originally filed claim 19), detection means for detecting a second call selected from the plurality of calls during a second setup phase; the memory having means for storing a call record associated with the second call without an indication of a second call through-connection; means for receiving a message at the first node announcing a restart operation within the second node; means for examining the record associated with the first call and the record associated with the second call; means for determining that the record associated with the second call does not include the indication of the second call through-connection; and means for releasing the second call. The closest prior art, Berg et al. (US 6,680,952) and Iwama et al. (US 6,600,735) disclose conventional communication system, either singularly or in combination, fail to anticipate or render the above features obvious.
